

Introduction to Full Arch

Jessica Lee DDS

Nov
13
Thur📍 Goldstein, Garber & Salama
Atlanta, GA**Course Description:**

FP1 – This course introduces clinicians to the comprehensive treatment of fully edentulous or soon-to-be-edentulous patients using fixed implant-supported prostheses.

The course focuses on the biomechanics, surgical-restorative coordination, digital workflows, and esthetic design principles that underpin modern All-on-X treatment. Participants will explore case selection, guided surgery integration, immediate loading protocols, and long-term prosthesis.

Course Objectives:

By the end of the course, clinicians will be able to:

- Understand FP1 prosthetic concepts and All-on-X principles.
- Evaluate patients using clinical, radiographic, and digital tools.
- Plan implant placement and prosthetic design for esthetics and function.
- Execute clinical and lab steps, including immediate and final restorations.
- Apply digital dentistry tools: intraoral scanning, guided surgery, CAD/CAM.
- Prevent and manage prosthetic and biological complications.
- Optimize patient outcomes and confidently present full-arch treatment plans.

**ABOUT THE PRESENTER**

Jessica Lee
DDS

Dr. Lee is an accomplished dentist and owner of Atlanta Dental Studio and East Atlanta Dental with over sixteen years of clinical experience, fifteen of which have been dedicated to serving patients in the metro Atlanta area. A proud graduate of the highly ranked University of Michigan School of Dentistry, she continues to uphold the university's legacy of clinical excellence and innovation in her daily practice. Dr. Lee is deeply committed to the artistry of smile design and the science behind esthetic results. She also holds a Fellowship Certification from the International Academy of Dental Implants and is an active member of Dental XP, a leading global platform for advanced surgical and restorative education. Today, Dr. Lee's professional passion includes transformative full-arch dentistry—restoring not just function, but confidence and quality of life through meticulously planned implant-supported restorations.
