COURSE DESCRIPTION

An immersive live-patient course for dentists with implant experience who want to build confidence in full-arch implant rehabilitation using an All-on-X digital workflow. Participants review diagnosis, CBCT-based planning, guided and non-guided approaches, live surgery, photogrammetry, immediate-load decision-making, provisional delivery, complications, and implementation.

COURSE OBJECTIVE

By the end of the course, clinicians will be able to:

- Identify appropriate candidates for All-on-X full-arch implant treatment.
- Evaluate CBCT scans and digital records for full-arch planning.
- How to manage vertical and horizontal defects based on presented decision trees.
- Understand the relationship between implant position, bone reduction, restorative space, prosthetic design, and maintenance.
- Describe the surgical sequence for All-on-X treatment.
- Evaluate primary stability and determine whether immediate loading is appropriate.
- Select and verify multi-unit abutments for full-arch prosthetics.
- Understand the role of photogrammetry and digital verification in full-arch workflows.
- Participate in or observe live-patient All-on-X surgical treatment under instructor supervision.
- Recognize common surgical and prosthetic complications.
- Build an implementation workflow for All-on-X treatment in private practice.

TARGET AUDIENCE

Designed for dentists seeking to enhance their confidence in full-arch implant treatment and All-on-X workflows. Ideal for dentists with implant surgical experience who want to master treatment planning, digital workflows, and immediate-load protocols.
